

Environmental Innovations Architecture – Urban Design – Planning

The 2022 issue of Teka Komisji Urbanistyki i Architektury Oddziału Krakowskiego Polskiej Akademii Nauk is the journal's fiftieth, anniversary volume. It is dedicated to environmental innovations that have made and continue to make an impact on the architecture, urban design and planning of cities. It is another volume in which environmental issues are raised. However, this time they are viewed through the lens of novelty: technologies, solutions, design processes, standards, plans and ideas. Emerging concepts such as the smart, resilient, sustainable, green or eco-friendly city, and their corresponding architecture and urban design, are an attempt at answering new challenges on many fronts, including in the context of identity, cultural heritage or climate change.

We would like to invite prospective authors to submit manuscripts that respond to these issues.
